DETAILED ACTION

Applicant's election without traverse of Group I and the species of CT-1 and cardiac disease in the reply filed on 12/23/2010 is acknowledged.

Claims 5, 14-18, 20-24 and 28-40 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions or species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/23/2010.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-4, 6-13 and 19 rejected under 35 U.S.C. 102(a) as being anticipated by Guy (WO 02/094862, 11/28/2002).

Guy discloses human skeletal muscle cells comprising a construct comprising either of HIF-1, HIF-2 α (also known as EPAS1) or HIF-3. Expression of several genes was induced, including LIF-R. See in particular pages 40-42 and Table 2. Cells were transfected with the vectors (page 40), or adenoviral vectors were also prepared (page 37). The HIF sequences were cloned from pcDNA vectors (page 36) and are considered to comprise cDNA (as opposed to the genomic DNA sequences) absent evidence to the contrary. The induction of CT-1 is considered to be an inherent feature of the expression of HIF-2 α as this is not a step performed by the

skilled artisan, but rather a direct consequence of HIF-2 α expression (a transcription factor). Guy acknowledges that the gene chip used for analysis of the induction of genes by the HIF proteins is limited and may not detect all genes induced (page 41). EPAS1/HIF-2 α was expressed in vivo via direct delivery or transplantation into myocardial cells (pages 39, 42). Improved cardiac function, i.e. improved metabolic activity, was shown.
